**Size:** 10'0" x 25'0"

**Days to Complete:** 17 Days

**Project Description:**

This NRB Guard House is the mainstay of the security operation at this large transportation depot in Cambridge, Ontario. It is designed to protect security staff that control vehicular and pedestrian traffic at this 24/7 operation. The interior bi-level floor is raised so that security staff is elevated to truck cab height for ease of communication and document transfer both in-coming and out-going.

The Guard House is totally self-contained, so the guards can monitor the premises in all directions without leaving their post. Factory built by NRB Inc., it is designed to offer an efficient working environment for Security Officers and equipped for comfort with air conditioning and a built in two piece washroom. Sliding and insulated glass windows and metal doors are located on both sides of the building.

The exterior of the building was designed to match the finish of the existing buildings on site with NRB's FP1 aluminum panel system on the front elevation. The interior finish consists of vinyl tile floor, vinyl covered drywall wall finish and suspended acoustical ceiling.

Designed to fit on an existing 10' x 25' perimeter foundation, the building was craned into position by NRB Inc.

NRB Guard House buildings are available in a variety of styles and sizes with a wide range of options.
