

NRB

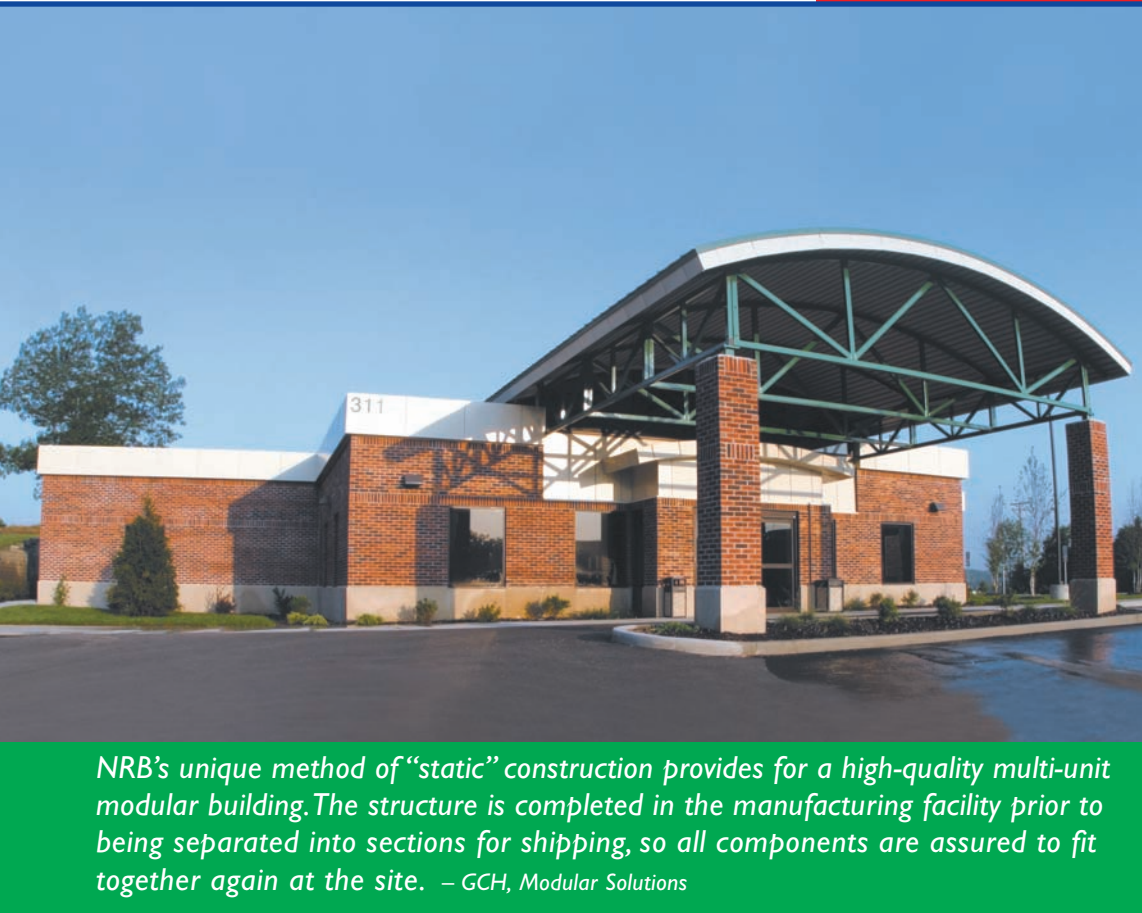

modular building specialists

BOONE IMAGING CLINIC COLUMBIA, MISSOURI

Building Size: 9,860 square feet
Building Start: December, 2002
Building Complete: February, 2003

PROJECT PROFILE

Health Care
Project: #N25054

NRB's unique method of "static" construction provides for a high-quality multi-unit modular building. The structure is completed in the manufacturing facility prior to being separated into sections for shipping, so all components are assured to fit together again at the site. – GCH, Modular Solutions

PROJECT OVERVIEW:

When the client needed this new state-of-the-art MRI imaging clinic in a hurry, NRB was the builder of choice. The MRI's specific calibration and extreme sensitivity to vibrations, meant the suite needed a high ceiling, and an independent concrete foundation. To accomplish this, NRB created a design that allowed the MRI suite to use 3 walls of the existing clinic, place a raised prefabricated "roof hat" over the room on site, and close in the remaining wall with a panelized system.

FEATURES & BENEFITS:

- Interior has all the architectural features and finishes requested by the client for the utmost in patient comfort and sense of well-being, including a cozy fireplace in the Waiting Room.
- Raised barrel vaults and extensive use of glass throughout allows improved natural day-lighting for a brighter interior that uses less artificial light. Barrel vaults were all fabricated by NRB at the plant and shipped on a flatbed trailer for installation at the site.
- The building contains very specialized mechanical, electrical and medical gas systems to suit all client and code requirements, all preinstalled and inspected at the NRB plant prior to shipment.
