NORTH LITTLE ROCK MRI NORTH LITTLE ROCK, AK

Building Size: 7,400 square feet
Building Start: August, 2003
Building Complete: November, 2003

PROJECT PROFILE

Health Care
Project: #035028

“The design and construction of these facilities can be very challenging, NRB’s quality construction enabled us to deliver a high quality, cost effective building to our customer.” – GCH, Modular Solutions

PROJECT OVERVIEW:

NRB worked together with a modular construction dealer-partner specializing in medical facilities, to design and fabricate this unique MRI clinic. The building had two different elevations, the front being single storey and the back being two-storey as the grade sloped away. To accommodate the unusual site, the upper floor was modular construction while the lower back floor was site built into the hill, and designed to carry the upper modular level.

FEATURES & BENEFITS:

- Extensive use of curtain wall glazing provides a bright, welcoming interior and along with the site brick applied, a clean and contemporary exterior look.
- All interior finishes and features were customized to suit the owners needs, from millwork selection to wall, ceiling and floor finishes.
- Electrical and mechanical systems are customized and designed specifically to meet the needs of the imaging equipment, treatment rooms and patient comfort and care.
- Superior building envelope with pre-poured concrete floors and structural steel construction are used in the design to give the owner the strength, durability and performance they require for years to come.
