

ELEVATED WORKPLACES

When space is at a premium and you need to conserve valuable production floor area, the solution is to reach to a higher level. These space-saving NCP-1000 In-Plant workplaces used for a variety of applications, are factory built to be elevated above the plant floor on our engineered structural platforms. Accessed by steel stairways and landings, these facilities can provide your supervisory personnel with a full view of the plant operations below, while leaving the plant floor space underneath free and clear for inventory or manufacturing operations.

WORKPLACES ON THE FLOOR

Whether you need private offices, team rooms, conference space or lunchroom areas, the NRB NCP-1000 demountable non-combustible panelized building system can give you total design flexibility for your needs today - or tomorrow. Our system is all steel framing for rugged durability, fully insulated for better sound attenuation, and provides interior and exterior finishes that are low maintenance. The NCP-1000 system is pre-wired with outlets and features where you need them, with heating and cooling options as required. It offers easy assembly and can be quickly dismantled, relocated and reassembled or reconfigured to suit your changing needs. Ask about our "Office Express" inventory program for quick shipments on basic models.
