

## *Need Office Space in a Hurry?*

### *Find Out More About NRB's NCP-1000 Office Express*

NRB recognizes that sometimes when the need for in-plant office space arises, the faster you can get your personnel settled in a good working environment, the faster you can improve productivity and efficiencies. Whether it's a small shipping office for your shipper/receiver, a new home for your plant supervisor, or a board room for team meetings, choosing your building components from our "Office Express Inventory", means we can have your new office ready to ship to you within 3 working days of your approval of the layout drawing .

Sizes ranging from approximately 9'0" x 9'0" up to 13'0" x 17'0" with choices in quantities of electrical outlets, conduits, windows and doors. **Our NCP-1000 non-combustible panelized building system is the strongest, most cost efficient demountable wall system available on the market today.** Our wall panels are already in stock, so installation is faster and easier than most systems. Our unique "non-progressive" fastening system allows you to assemble or reconfigure your building with ease.

Stone Grey steel exterior finish, steel roof deck, insulated steel framing for sound attenuation and rugged durability, vinyl covered gypsum board on interior walls and suspended acoustical ceilings all combine to give you a bright, quiet and maintenance free environment . Vinyl composite tile is optional for your plant floor.

The NCP-1000 *Office Express* Inventory lets you choose from a range of basic sizes with a standard number of features such as electrical outlet panels, window panels, door panels, and solid panels. Panel layouts shown won't work for you in your location? For more flexibility, you can even rearrange the configuration of the panels shown, add or delete some types of panels and replace with others—so long as they are a part of our Office Express Inventory program.

**See Over for Layouts and Details.**

**Celebrating over 25 Years of Modular Building Excellence**
