

Rainbow Gas Bar Hamilton, Ontario

Size: 16' x 45'
Square Footage: 704 square feet
Days to Complete: 58
(From Production Start to Date Occupied)

Project Information:

As speed of construction to replace an existing kiosk was a key requirement with this job, a modular structure was chosen.

In order to speed up the installation process, this building was fabricated using steel & concrete building technology—custom engineered to be delivered and installed in one piece.

Architectural features include:

- Exterior cladding in a standard face brick to match an existing building on the same site.
- Exterior glazing is tempered mullion-less type glass allowing one way viewing.
- Interior features include a ceramic floor, overhead lighting and counters to meet the Owner's corporate colors and image as well as providing durability.

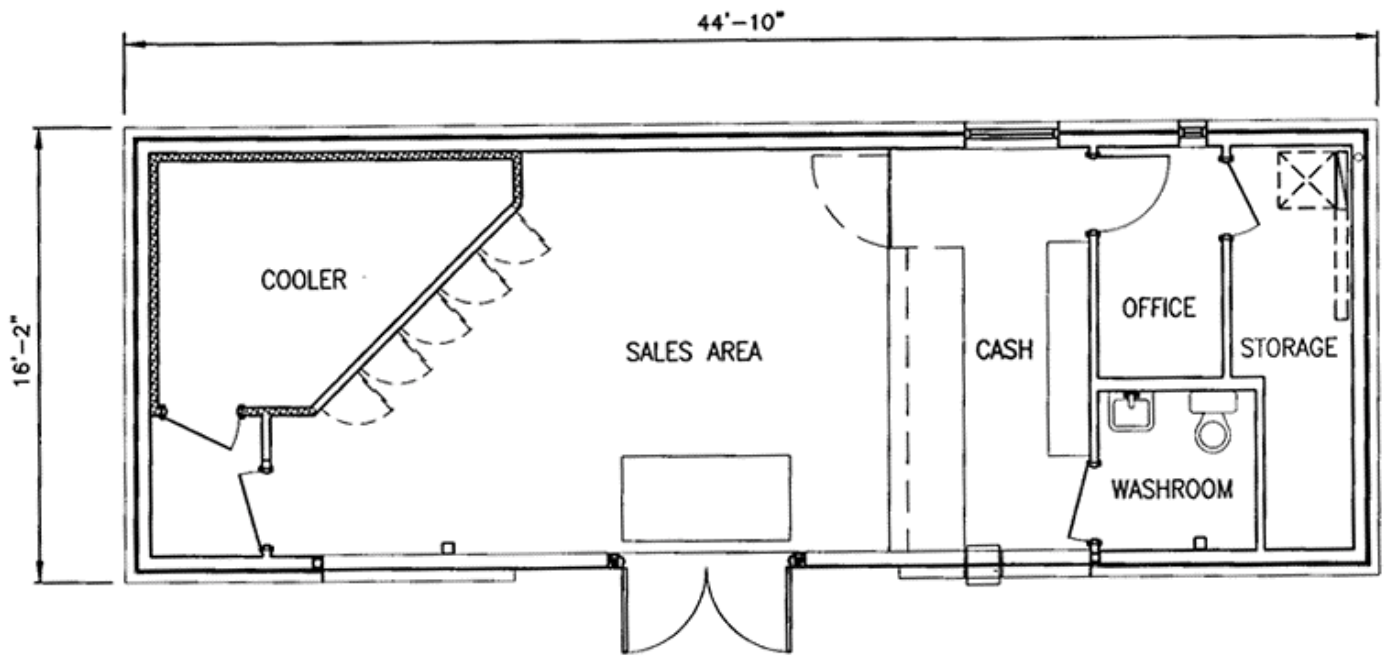

The layout of the store allows viewing of the pump islands and proper flow of customer traffic in the retail outlet.

NRB Modular Buildings.
Ready when you are.
