

## The NRB Total Building Experience™

NRB manufactures buildings through a unique 9-step modular construction process called **The NRB Total Building Experience™**, an efficient, custom-design, time-expedited system honed across more than 25 years of industry leadership and client trust.

With full-service facilities in both Canada and the USA, NRB consistently challenges conventional construction methods, delivering industrial, commercial, institutional, and retail buildings of impressive design, finish, durability and performance. Noted for architectural excellence, technical innovation and cost efficiency, NRB modular construction has been employed by forward-thinking building owners, facilities planners, architects and engineers for everything from a 50 sq.ft toll booth to a permanent multi-storey school addition of more than 50,000 sq.ft.

At NRB, the word 'modular' simply defines a method of construction, where the building is created off-site under controlled conditions, then transported to the site in modules, and installed on the foundation. Our vertically integrated operation results in the completion of up to 95% of the project at the plant including plumbing, mechanical, electrical, and architectural finishing. Advanced AutoCAD design ensures engineering excellence. Interior and exterior finishes are virtually unlimited. All NRB structures meet or exceed national building codes, and, manufactured with wood frame, steel frame or steel with pre-poured concrete floors are typically more durable than traditionally built facilities. The benefits from

**The NRB Total Building Experience™** include speed to completion – typically 25% to 40% faster than conventional building as the site can be simultaneously prepared – as well as customized designs, flexibility of location, year-round construction, minimal site disruption, consistent quality assurance and competitive pricing.

A central NRB differentiator is its focus on values, not just products. Owned by the McNeil family for two generations, NRB is firmly focused on customers – from first consultation through site-assembly and beyond – in a team environment driven by innovation, integrity, professionalism and personal responsibility.

The goal of every NRB project is full value beyond what was promised. This drives every step in our process. For example, **The Idea Exchange™** defines real-world possibilities and requirements up-front, allowing NRB to deliver better building solutions; **The Coordination Difference™** gives customers an accountable Coordinator to provide seamless support; finally, when the building is operational, **The Results Review™** measures results against objectives and assures every client that NRB is always available.

No other manufacturer delivers an integrated process as tightly as **The NRB Total Building Experience™**. The result? No other manufacturer delivers an advanced, innovative building solution – modular or traditional – with the speed, quality and attention to detail of NRB.

NO LIMITS... ONLY POSSIBILITIES
